

# VT VIBRATORY FINISHING BOWLS

## VT Finishers

The workhorse of the industry with its ability to handle the widest range of applications (from china plates to heavy castings) and capacities (ranging from 1.5 to 90 cubic feet), through customization, economy, ancillary equipment and automation.

- Industry's best designed and proven oil lubricated drive system incorporates double-row spherical bearings, large heavy-duty shaft and a thick-walled cartridge. (Grease lubrication system on small capacity models.)
- All heavy-duty welded construction.
- Minimum 1" thick premium polyurethane lining (three grades available including hot pour).
- Exterior mounted components provide easy access for maintenance and service.
- Extra large springs for durability.
- Most items needed for maintenance are available locally or on our shelf. We have the fewest custom made parts in the industry.
- All finishers are built strong enough to handle steel ball burnishing.
- Control panels are built to our customer's requirements, from simple push button starters to fully automated PLC controls with digital displays.

- On models with separation, there is a helical rise to aid unloading.
- Standard models, from 1.5 cu. ft. to 100 cu. ft., are custom designed to meet your application requirements.

	Capacity (cu. ft.)	Capacity (cu. ft.) F Models*	Motor HP	Number of Drains	Lubrication System	Discharge Height	Channel Width	Overall Diameter	Overall Height	Foot Print
VTG-2810 / F	1.5	1.6	2.0	1	Grease	33"	7.5"	28"	36"	3' x 3'
