

VT COMBO FINISHER/DRYER

Combine a Vibratory Finisher and Vibratory Dryer into one machine and you will profit by saving on floor space, operating cost, and initial investment. A Combo machine entails fitting a Finisher with an unlined outer channel and a heat system.

After a batch within the finisher channel is complete, it can then be screened and unloaded into the dryer channel where it typically travels around one pass, screens and then exits the machine.

- Industry's best designed and proven oil lubricated drive system incorporates double-row spherical bearings, large heavy-duty shaft and a thick-walled cartridge. (Grease lubrication system on small capacity models.)
- All heavy-duty welded construction.
- Minimum 1" thick premium polyurethane lining (three grades available including hot pour).
- Exterior mounted components provide easy access for maintenance and service.
- Extra large springs for durability.
- Most items needed for maintenance are available locally or on our shelf. We have the fewest custom made parts in the industry.
- Control panels are built to our customers requirements, from simple push button starters to fully automated PLC controls with digital displays.
- Process channel is heated directly from the bottom, distributing heat more evenly than standing heat lamp assemblies.

- Cool-down timer allows machine to run while cooling at end of cycle, eliminating scorching and cobb deterioration.
- Dust covers and dust collectors can be designed for any system.

	Capacity (cu.ft.) D/F	Motor HP	Number of Drains	Lubrication System	Discharge Height	Channel Width D/F	Overall Diameter	Overall Height	Foot Print
